

Helping your child with Maths:

ADDITION

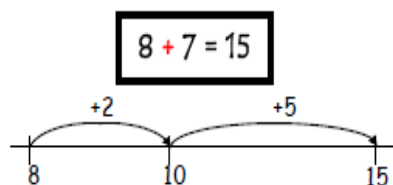

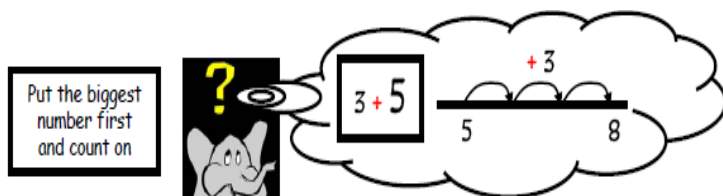

Stage 1: Practical and Adding on

Children use apparatus to add sets of objects together. This gets them ready to then add numbers using a number line to adding numbers without the need for objects.

Stage 2: Number lines

Add two single-digit numbers that bridge 10

Children use number lines to record their addition. As children progress, they will begin to use different sized jumps to make their addition more efficient. They should begin to recognise that the numbers can go in any order and it is more efficient to start with the larger number – even if the smaller number is first in the calculation.
